

In my current role as a professional player with the 9Pandas League of Legends team in Digos City, I have chosen to embark on the creation of a portfolio website. This platform will be crafted to spotlight not only my gaming experiences, achievements, and skills but also to provide a comprehensive insight into my journey as a dedicated esports professional while being a student.

Here's a breakdown of the planned structure and content for my gamer portfolio website:

Header Section:

- **Logo & Title:** An eye-catching logo and title that reflect my gaming persona. The title will link to my Facebook Page for easy access.
- **Navigation Links:**
 - Introduction
 - Tournaments: Comprehensive details about the various local tournaments I've participated in.
 - Gallery: An engaging collection showcasing highlights of my gaming experiences.

Introduction Section:

- A captivating statement that introduces myself as a professional gamer.

My Expertise Section:

- Showcases a curated list of my outstanding skills, emphasizing what sets me apart in the gaming realm. Using concise and impactful descriptions.

Tournaments Section:

- A detailed and organized list of the local tournaments I've actively participated in. Includes dates and the prizes of each tournament. This section should provide visitors a comprehensive view of my competitive journey.

Footer Section:

- Includes an array of icons representing various contact details such as email, social media links, and possibly a professional gaming platform ID.

I will be utilizing my knowledge, gained from w3school and various gaming communities and platforms, to create an engaging and visually appealing portfolio website.
